

1	2	3	4	5	6	7	8	9
10	11	12	13	14	15	16	17	18
19	20	21	22	23	24	25	26	27
28	29	30	31	32	33	34	35	36
37	38	39	40	41	42	43	44	45
46	47	48	49	50				

O resultado do exame conforme as respostas assinaladas foi de 86 em 100.

O que significa que **7 respostas assinaladas estão erradas**.

Em princípio, as erradas estarão dentro das 10 perguntas que tenho assinaladas, porque tinha dúvida em relação a estas. **Mas** pode muito bem ser qualquer uma.

Possíveis correções:

9) Colocaria a A; não a D

Acessível a TODOS os registados, mesmo os Roles criados pelos developers (que são registados - não os developers registados, mas os roles registados acrescentados pelos developers xD)

20) Colocaria a D (1º) ou B (2ª opção); não a A

@StringMatch é input na Query MAS ela tem que vir de uma Local Variable ou de um Input Parameter da Server Action / Data Action onde a SQL está

29) Colocaria a A; não a D

Quando criamos users a informação fica em "Systems" na Entity "Users"

37) Colocaria a B; não a D

Esta já me saiu 2x nos Exames teóricos e sempre respondi esta. Porque as expressões "Ifs" são de Java / JavaScript. E no Evento "On Initialize" dos Screens não se deve acrescentar verificações nenhuma para não causar problemas de performance, exceto em casos excecionais.

38) Colocaria a C // MAS INDECISO -> retificado A para C

Na a) a parte do "insert its result into the HTML" não me agrada muito. Porque o código HTML é gerado ao publicar a aplicação e nada tem haver com a "Data Retrieval"

43) Colocaria a A; e não a B

No Bookings, a DataAction GetRate é "refreshed" sempre que troca de dia ou são adicionados CheckIns, por exemplo. O gráfico altera-se

50) Colocaria a D; não a C

DataAction: "GetMovies"

Output: Movies (Movie List)

Assign Movies = GetMovies.List

Expression: GetMovies.Movies.Current.Title-> mas opção não aparece

A opção C é para um agregado normal e não um outuput de uma DataAction

Which of the following is a possible reason for this error to be displayed to the user?

 The INSERT statement conflicted with the FOREIGN KEY constraint "OSFRK_OSUSR_FOO_TRAINEES_OSUSR_FOO_GENDER_GENDERID". The conflict occurred in database "FGFGS7013", table "dbo.OSUSR_FOO_GENDER", column 'ID'. The statement has been terminated.

Image

Selecione uma opção:

- ☐ a. The End-User is trying to add an existing Trainee on the Gender List, without selecting the Trainee name and before the Save Button is clicked. Thus, the Trainee Identifier is sent to the Database as NULL.
- ☐ b. The Developer defined the GenderId as a Mandatory field on the Gender Dropdown widget, but the End-User forgot to selected one valid Gender when he saved the Trainee Record on the database.
- ☒ c. The Entity Trainee has a GenderId attribute, which is a Foreign Key to the Entity Gender. The GenderId attribute is also marked as mandatory on the database. And the End-User is trying to save a Trainee without selecting a valid Gender on the Form.
- ☐ d. The Entity Trainee has a Unique Index with two of its attributes: Trainee Identifier and Gender Identifier. If an End-User tries to Save a duplicate Record of the Trainee with the same Gender, the error will be displayed.

In a screen, you need to show some information that is stored in an Entity. But you only want to show it when the user requests it explicitly by clicking a link on the screen. In this scenario, choose the right option.

Selecione uma opção:

- ☐ a. Use the System.IsPageLoad() action on the Aggregate's On After Fetch event to identify if the page is loading and remove the data in case it returns True. Later, use a Server Action with a Data Refresh to fetch the data when the user requests it.
- ☒ b. Set the Fetch property of the Aggregate to 'Only on demand' to avoid executing the Aggregate after the page is initialized and use a Data Refresh node to execute the Aggregate when the information is required.
- ☐ c. Aggregates and Data Actions run asynchronously immediately after the Screen Initialization happens, so use a Local Variable to store the information and use a Server Action to fetch the data when the user requests it.
- ☐ d. For this scenario, it is not possible to use an Aggregate. Use a Data Action with an Input Parameter of type Boolean, that will be used to identify when to return the data. Call the action passing true to it when the user requests the data.

Which of the following **is not** a step to define Pagination in a List widget?

Tempo restante 0:09:22

Selecione uma opção:

- ☐ a. In the properties of the Aggregate that fetches the data, set StartIndex to MyStartIndex, and the Max Records to MyMaxRecords.
- ☒ b. Define the Aggregate that fetches the data to be requested only on demand.
- ☐ c. In the properties of the Pagination Widget, select New Client Action to set the handler for the OnNavigate event of the pagination logic.
- ☐ d. Create MyStartIndex and MyMaxRecords Local Variables with integer data type, on the Screen. Set the default values of these variables.

Based on the image below, what should be the Value associated with the Expression Widget if you want to display the Movie Title?

Your data is fetched from the Data Action GetMovies, which returns the output Movies (Movie Record List).

Movie List

Title	Year	Plot Summary	Gross Takings Amount
Expression	2015	Three decades after the defeat of the Galactic Empire, a new threat arises. The First Order attempts to rule the galaxy and only a ragtag group of heroes can stop them, along with the help of the Resistance.	\$815,843,529.00

    Start((Start)) --> GetMovies[GetMovies]
    GetMovies --> Movies[Movies]
    Movies --> End((End))
    
```

Selecione uma opção:

- ☐ a. Movie.Title
- ☐ b. GetMovies.Title
- ☒ c. GetMovies.List.Current.Movie.Title
- ☐ d. GetMovies.Movies.Current.Movie.Title

Perguntas extra:

An End-User logged in to your Reactive application is trying to access a Screen, but the user doesn't have the required role permissions checked on that Screen. What will happen in this situation, taking into consideration the OnException flow image below?

Selecione uma opção:

- ☐ a. If the user's Session didn't timeout, the user will be redirected to another screen.
- ☐ b. The user will be redirected to the Users Applications here she/he can assign the role to her/his account.
- ☐ c. First, the user will see a generic Exception Message (from AllExceptions). Then, the user needs to click on the button to try the communications between the app and the server, and only if the communication test runs with success, the Security Exception will be performed.
- ☐ d. The application will close, and the user account will be blocked.
